Starkville, MS 39759 - Oktibbeha

Soil Test Details:

Report Date: 10/11/2022

Recommendations					
Crop		Actual Nitrogen	Phosphorus (P ₂ O ₅)	Potassium (K ₂ O)	Lime
Field: 1	Date	Sample: 1426			
Beans and green peas	Yr 1	50 lbs/acre	80 lbs/acre	80 lbs/acre	0 tons/acre
	Yr 2	50 lbs/acre	80 lbs/acre	80 lbs/acre	
	Yr 3	50 lbs/acre	40 lbs/acre	60 lbs/acre	

Applicable to lima beans, snap beans, and green peas. The recommended N, P and K fertilizer(s) should be used in a preplant application. For lima beans, double the K₂O rate for the preplant application and sidedress with up to 30 lbs N 3-5 weeks after emergence. For green peas, increase the K₂O rate by 25% for the preplant application.

If lime is recommended, use dolomite lime to supply magnesium. If lime is not recommended and the crop is corn, sorghum, cotton, or ryegrass, use 10 to 20 lbs of magnesium per acre if the soil test Mg level is medium or low.

The sulfur level reported is a calculation based on the organic matter level and is an indication of the potential reserve sulfur from this source. For this reason, fertilizer sulfur is not indicated by this test and a field that is low in organic matter will show a low sulfur level, even if sulfur fertilizer has been applied. Use the sulfur level as a guide for the need of applications of sulfur fertilizer, particularly on cotton, corn, sorghum, commercial horticulture crops, and hay crops.

Your soil has received no lime recommendation on this field. However, the soil pH is near the critical level and will probably need lime before three years have elapsed. Either soil test this field each year or apply 1 ton of lime in the second year.

Soil Test Report - 092280FB97

Soil Test Details:

Sample: 1426 - 1
Crop: Beans and green peas (lima and snap beans, green peas)
Date Received: 09/28/2022
Report Date: 10/11/2022
Tests Requested: Soil test + organic matter **\$10
